Stat.uz data used

According to statistics, the share of the services sector in GDP is increasing. In the development of the services sector, catering services play a significant role in the domestic and foreign tourism markets.

Since the demand for "halal" catering services based on international "halal" standards is also

increasing for Muslims visiting our country, organizing halal catering is relevant.

this regard, the restaurant plays a special role in providing "halal" food services to tourists.

Halal, halal (Arabic: ḥalāl - permitted) - "everything that is permitted and acceptable in Islam" (as opposed to haram). Most often, this concept is used to refer to food that is properly prepared and permitted for Muslims.

Honest restaurants are honest food preparing general food enterprises . Such also applies to restaurants atmosphere , service show and interior available . This in institutions alcoholic drinks is not given , because on the menu such of products existence restaurant honest to be exception does .

“ Halal ” restaurants Arabic, Tatar, Uzbek, Turkish and Muslim culture other from the kitchens different kind in complexity food available . This of institutions in some prayer rooms there is .

Honest to restaurants not only Muslims , maybe healthy marriage style take to go and good quality food consumption to do wanted every one person visit order possible .

When setting up a restaurant, choosing its "restaurant concept" is essential to organizing halal food and requires attention to the following.

The most important condition of the "restaurant concept" is the desire of today's guests to know in advance exactly what kind of food, atmosphere, and new modern and high-quality forms and levels of service will be provided in the restaurant.

The restaurant concept should reflect everything that can affect the guest's perception of the restaurant. Concept development is the process of creating, analyzing and systematizing ideas that will create the image of the restaurant. The restaurant owner and developer must make several complex decisions , each element of which must create a favorable opportunity for guests to become regular customers.
