Annotation: This article highlights the importance, relevance and modern approaches to teaching theology on the basis of digital educational technologies. It also analyzes the possibilities of developing religious tolerance, information literacy and critical thinking skills in students through the introduction of digital educational tools into the educational process.

Keywords: religious studies, digital education, innovative method, interactive platform, information technology, tolerance.

Introduction

In the current era of globalization, modernization of the education system, its organization on the basis of digital platforms remains one of the pressing issues. Religious studies is an important field that not only teaches religious knowledge, but also educates young people ideologically, morally and spiritually. Therefore, the use of digital educational technologies in this subject not only facilitates the teaching process, but also forms independent thinking, analysis and evaluation skills in students.

Religious studies plays an important role in increasing religious literacy in society, strengthening tolerance between people of different faiths, and promoting national and universal values. Therefore, the use of digital technologies in the process of teaching this subject is not only a requirement of the time, but also an effective way to educate the younger generation as spiritually mature individuals.

With the help of digital educational tools (multimedia, online platforms, virtual laboratories, electronic textbooks), the process of teaching religious studies can be organized in an interactive environment. This develops in students the skills of free expression of their opinions, analytical approach, drawing conclusions based on scientific evidence, and a critical view of religious sources. Thus, teaching religious studies through digital education is of urgent importance today not only as a pedagogical, but also as a socio-spiritual need.

Main part

1. The essence and importance of digital education: Digital education is a system of organizing the educational process using information and communication technologies (ICT). Its main goal is to make the educational process interactive, convenient and effective. Today, digital education has become a factor that not only complements traditional lessons, but also creates an independent

learning environment.

In religious studies, digital approaches allow students to visually study various religious sources, historical facts and cultural heritage.

2. Forms of application of digital technologies in religious studies:

- Multimedia tools - video lessons, audio lectures, documentaries on religious topics.
- Organizing lessons through online platforms - Google Classroom, Moodle, Edmodo.
- Controlling knowledge using interactive tests and quizzes - Kahoot, Quizizz, Mentimeter.
- Virtual tours – 3D tours of historical religious monuments.
- Using social networks – creating religious educational content via Telegram, YouTube.

2. Advantages of digital education:

1. Flexibility of the educational process (the ability to study anywhere and at any time).
2. Interactivity and the breadth of opportunities for exchanging ideas.
3. Development of analytical and creative thinking.
4. Deeper understanding of the ideas of religious tolerance and tolerance.
5. Facilitation of teacher control and transparency of assessment.

4. Problems and ways to overcome them:

Problem Solution

Low digital literacy of teachers Organization of special advanced training courses

Weak Internet infrastructure Development of digital education infrastructure in universities

Lack of local electronic resources Creation of a national electronic library on religious studies

Passivity of students Introduction of gamification elements

Conclusion

Teaching religious studies based on digital education is becoming an integral part of the education system today. Digital technologies make the educational process interactive, interesting and effective. Most importantly, this approach serves to form religious tolerance, critical thinking and spiritual maturity in the younger generation.

In the future, the full integration of religious studies into the digital environment, the creation of national electronic textbooks and platforms, and the training of teachers based on modern pedagogical technologies will be of great importance.
