

MY ROLE IN THE DEVELOPMENT OF THE COUNTRY AS A YOUNG SPECIALIST

Tursunova Zarina Ne'matovna

Lecturer at Asia International University

The development of a country is, first of all, closely connected with the knowledge, aspirations, and activities of the young generation. Indeed, youth are the foundation of the homeland, the future of the nation, and the cornerstone of progress. Today, wide opportunities are being created for young people in our country to grow into well-rounded individuals, acquire professions, and master modern knowledge and skills. In particular, the improvement of the education system, the deep study of foreign languages, and the creation of conditions for the full acquisition of innovative technologies are clear evidence of this. As a young specialist, I have also set myself the goal of making the most of these opportunities, contributing to the prosperity of my homeland, and gaining a worthy place in the development of our country.

Nowadays, the number of knowledgeable and dedicated young people is steadily increasing. Our country provides broad opportunities for the youth. The role of Muhammadali Eshonqulov, who is recognized as an “acme personality” of his time, is invaluable. Despite being young, he continues to move towards success and, by making wise use of the available opportunities, tirelessly works for the development of the youth of our nation.

- Firstly, he uses effective and beneficial new methods to increase young people's love for books.
- Secondly, through educational, upbringing, and psychological approaches, he finds a way to the hearts of the younger generation.
- Thirdly, he is introducing private schools called “Yuksalish” in every region and district. May the number of such young people in our country continue to grow!

Just as a coin has two sides, some of our youth fail to use the opportunities provided to them correctly and face setbacks. For instance, some who go abroad with the intention of studying join harmful groups and are left behind. Moreover, if every Uzbek youth felt responsible for their homeland, nation, and people, they would surely achieve their goals. It is also no secret that some young people are being deceived into joining various movements. Preventing this means being able to make wise use of the right opportunities.

It is well known that educational institutions play an invaluable role in providing education and upbringing. Every subject is directed toward a certain purpose. Today's rapidly developing youth can bring about great changes in progress by showing activeness in society, creating new ideas, and finding positive solutions to problems. In our country, to ensure a prosperous future and high-quality education for the youth, the teaching methods of Finland and Singapore are being introduced. There are also a number of goals aimed at developing logical thinking and fluent speech in the future generation. It is necessary to pay great attention to guiding the younger generation toward professions, preparing them for future life, preserving our national values, and enhancing their modern knowledge.

If we look at the education systems of many countries, we see that they introduce new subjects into the curriculum based on their socio-political and economic conditions. For example, martial

arts are included in China, while Japan has impressed the world with its discipline. In Uzbekistan, a new subject called “Hour of the Future” has been introduced, providing young people with useful knowledge. All of this is for us, the youth. In Conclusion

In conclusion, I would like to say that the development of a country depends on the dedication, knowledge, skills, and qualifications of its young specialists. If each of us devotes our knowledge and potential to the future generation, the prosperity of our homeland will become even brighter. The thirst for knowledge and the diligence of the young generation will lead us to even greater achievements in the future.

Thus, the greatest duty of a young specialist is to dedicate their scientific potential with loyalty to the progress of the homeland. Being a young specialist requires great responsibility. For me, mastering modern technologies, applying my knowledge and skills for the well-being and prosperity of my people, and helping our country to take its rightful place among the developed nations of the world is an honor.

In the near future, in my field, I have set myself the goal of becoming a patriotic, experienced, innovative, and initiative-driven specialist who brings benefit to society. The wisdom “Seek knowledge from the cradle to the grave” is a life principle and the key to the future for every young specialist. A youth who gains knowledge becomes the support of the people and the pillar of the nation. Indeed, “Knowledge is light, ignorance is darkness.”

As a young specialist, I consider it an honor to dedicate my knowledge and efforts to the development of my country. Because “A nation with knowledge is a powerful nation.” The dedication, thirst for knowledge, and enthusiasm of us, the youth, will take our country to great heights. Therefore, every young person must remain steadfast and devoted in the path of knowledge.

I would like to express my deep gratitude to our President, Shavkat Mirziyoyev Miromonovich, for creating such opportunities for us. For my homeland, my nation, and my people, I will always strive. I consider it an honor to raise the flag of my country high in the sky.
