**Abstract:** This article provides information on the types of waste problems their harm waste processing , elimination , waste landfills.

**Key words:** liquid waste solid waste , heavy metals, plastic containers, industrial enterprises, processing landfills, types of waste, mutual cooperation.

### **Enter.**

To people effect doer the most big external factor is nature. Around environment how much pure if a person is mentally and physically healthy, but if there are negative changes in the environment, it will have a great impact on human life.

In humans surface coming without treatment and viral diseases too in nature happened happening is the result of negative changes.

The world scale not only in Uzbekistan too the most current ecological from issues to one A recurring problem is the problem of waste.

The last in years household and industry of waste year after year is increasing land on the face has a negative impact on ecological stability.

To the data than present of waste 900 to near types note done each world emissions are increasing by 3% per year.

The world developed will go since people the number increased towards waste quantity too increased keeps going The accumulation of waste has an impact on environmental pollution and public health.

Waste too own in turn 2 types divided into:

- liquid waste
- solid waste

Waste lost won't go long years during does not rot in nature and to the soil own shows the effect .

To the box thrown away waste own to the address until it arrives 3 stage passes through.

- from the household came out waste initial at collection points
- quarter in neighborhoods waste collected in rooms .
- Special transport " cars them collect again download stations take goes Main part:

Currently Republic across 221 ta waste Polygon there is being their area 0.5 gk 70-80 Most landfills have a lifespan of 20-30 years.

Information until given mostly of polygons 98% waste with full

In our country there is 80 from more than waste again work enterprises 1 in the public processes 10 % of the waste generated throughout .

More in volume again work for waste to species separating modern techniques take must come .

Saraland in the process population careless too .

If the residents sort themselves, the work will be much less , and the amount of waste sent to the landfill will also be reduced. 2028 up to again workable waste 20% from 60% up to deliver task road placed

Currently, the share of non-biodegradable waste in the composition of household waste is increasing. Incorruptible waste environment harms , from himself methane gas work emits This causes climate change.

The majority black on polygons saw the smoke and lit it He thinks he sent it .

But so it's not, waste at the landfill another waste with by joining burn to see possible Waste here rots for many years. For example:

cardboard and papers From 1 month 2 up to

- plastic package-10 from - 20 up to
- plastic glass-50 year
- battery-100 in
- plastic Baklashka - 450 in it rots. Waste atmosphere pollution too own has shown its effect and causes the death of living organisms in it.

### **Discussion and results :**

Waste increase prevention get for the following There are methods :

Waste sorting

Modern techniques using again work

Opportunity until Salafan packages instead of rucksack packages  
current reach An effective method for both human health and  
ecology

Cooperation organize to achieve , that is one a person one in the store thing buy took say, waste  
to organize a discount if you take it back, to use similar methods.

True, our society is not ready for this , but it should be introduced slowly.

**Bottom line:** yes to the conclusion to arrive maybe waste problem current of problems one is  
considered When solving this problem, divide it into types and process it.

But waste again at work of them right use in our country each one a person in charge of

To us given task that's it a waste I'm sorry prevention to get waste defined to the place it is  
necessary to throw away, only if it is small, we will have made our contribution.
