

ROLE AND PROSPECTS OF THE LIGHT INDUSTRY INDUSTRY IN THE ECONOMY DEVELOPMENT OF THE BUKHARA REGION

Sadiqova Nigora Turaevna

Economics department teacher Asia
international University , Bukhara

Abstract: This article provides a scientific analysis of the role of the light industry sector in the development of the economy of Bukhara region, its existing opportunities, and future development prospects. The study examines the dynamics of textile products, clothing, leather and related goods production in Bukhara region during 2016–2025. The article also evaluates the share of light industry in total industrial output, structural changes within the sector, production growth rates, and the sector's impact on regional economic development. The results show that light industry is a strategically important sector for deepening industrial diversification, processing local raw materials, increasing employment, expanding export potential, and developing small business in Bukhara region. The article proposes scientific and practical recommendations for modernizing the light industry sector, improving the cluster system, increasing the share of finished products, and introducing innovative technologies.

Keywords: Bukhara region, light industry, regional economy, textile industry, clothing production, leather goods, industrial diversification, export potential, cluster, innovation, regional development.

INTRODUCTION. Regions economy stable development , industry networks modernization to do and local raw material from resources effective use Uzbekistan economic of the policy priority from directions one is considered . In the country done increasing structural reforms of the regions economic potential complete to come true production , industry working release expansion , export-oriented products size increase and new work their places to create focused [3].

Light industry territorial economic in development separately place catchy from networks is one . This network to the composition textile products , clothing , knitwear , leather shoes and skin products working release enters . Light industry economic importance is that it is relatively less capital requirement , high labor resources attraction to be , women and youth busyness increase to the possibility ownership and ready products through high additional value create with separated stands [7].

Bukhara province light industry develop for important economic to the potential has from the regions one is considered . In the region cotton raw material base , historical handicraft traditions , labor resources , transport and logistics opportunities , industry infrastructure and entrepreneurship environment available . This factors in the province light industry stable development for comfortable conditions creates [6].

With this together , Bukhara in the province light industry from the possibilities complete use , network in the composition ready product share increase , export geography expansion , innovation technologies current to grow and small business subjects working release to cooperation attraction to do issues current become remains [5].

This of the article purpose Bukhara province economy in development light industry network instead scientific in terms of analysis to do , network development dynamics assessment and prospective priority directions from justification consists of .

The research main tasks of the following consists of :

First of all , Bukhara in the province light industry network industry working in the output instead to determine ;

secondly , during 2016–2025 light industry networks growth dynamics analysis to do ;

thirdly , textiles , clothing and skin products working release in the directions structural changes assessment ;

fourth , light industry territorial economy , employment , export and small business to develop the impact open to give ;

fifth , Bukhara in the province light the industry develop according to scientific and practical offers working exit

LITERATURE ANALYSIS. Regional the economy in development industry networks role many economist scientists by studied . Scientific in literature light industry often industrialization , employment increase , export expansion , small business develop and local raw material deep again of work important factor as is evaluated [7].

Light industry territorial in the economy The importance , first of all , of its labor capacity high network that with Textiles , sewing , knitting and leather shoes products working release processes many numerical worker It requires power . This is in the regions employment increase , especially women and the youth working release to the process attraction in the process of important importance profession [7].

AA Abdullayev is light industry networks development economic mechanisms analysis so , this network territorial income growth , work places creation and industry working release in diversification importance based on given by the author in my opinion , easy the industry in development internal market needs and for export directed working release between balance provide important is [7].

BI Karimov regional the economy diversification in doing textile industry instead learn , cotton from raw materials ready product working until release was value chain formation the necessity emphasized . His in my opinion , textiles clusters raw material cultivation , reproduction work , ready product working release and export processes into a single system combine through territorial industry efficiency increases [8].

DR Kholmatov and NS Tursunov regions industrialization according to international experience analysis China , Bangladesh , Turkey and Vietnam such as in countries light industry economic growth important driver as formed This countries in experience for export directed working release , cheap and qualified worker power , state support , logistics infrastructure and international to the markets exit opportunities important role played [9].

Uzbekistan under the circumstances light the industry develop state economic of the policy important from directions one as Textile and sewing industry intense development , cotton - textile clusters forming , ready product working release share increase , export encouragement and in the regions new working release capacities to work unloading according to row measures done is increasing [5].

Literature analysis this It seems easy . industry territorial development effective model three main to the factor relies on : local raw material base , qualified labor resources and to the market exit opportunities . Bukhara province this factors according to certain to the potential has and they harmonized without develop province economy competitiveness to increase service does [6; 8].

RESEARCH METHODOLOGY. In the study systematic analysis , statistics comparison , dynamic rows analysis , structural analysis , logic generalization and scientific abstraction from the methods used . Research object as Bukhara in the province light industry network development processes selected . Research subject and light industry territorial to the economy effect , production release size , network structure , growth pace and prospective development from directions consists of .

Light industry in the composition following main directions studied :

textile products working release ;

clothes working release ;

skin and to him/her relevant products working release

The study covers the years 2016–2025 . statistic information analysis was done . Indicators current in billion soums in prices expressed . Analysis in the process general industry product , production release industry size , light industry total size , light industry general in industry share , network internal composition and growth coefficients was evaluated [1; 2].

ANALYSIS AND RESULTS. Bukhara in the province light industry network last in years consistent developed Analysis being done in the period in the province total industry working release size noticeable at the level increased . In 2016, the total industry product volume 5,569.6 billion soums organization reached If so , in 2024 this indicator 42 243.7 billion in soums reached . During this period general industry product 7.6 times larger increased [1].

Light industry products working release size and 1,108.3 billion in 2016 from soums to 9,122.0 billion in 2024 in soums It 's easy . industry 8.2 times the volume increased shows . This situation Bukhara in the province light industry network general to industry relatively high growth to the potential has that it is confirms [1].

Table 1

Bukhara in the province industry and light industry working release growth dynamics

Year	Total industry product , billion soums	Production release industry , billion soums	Light industry total , billion soums	Light industry share , %
2016	5,569.6	4,768.4	1 108.3	19.9
2018	8,601.2	7,601.8	1,966.0	22.9
2020	17,574.4	16,781.7	3,734.1	21.2
2022	27,202.4	25,712.8	5,999.9	22.1
2024	42,243.7	39,962.6	9 122.0	21.6
Growth , %	758.4	838.1	822.9	—

Source : Uzbekistan Republic National statistics committee information based on author by compiled [1].

From the data in Table 1 apparently It is clear that Bukhara in the province light industry general industry in the composition stable to share has . Lightweight in 2016 industry total in industry share of 19.9 percent organization reached while in 2018 it was 22.9 percent reached . In 2020, this The indicator is 21.2 percent , 22.1 percent in 2022 , and 21.6 percent in 2024 . organization So , it 's easy . industry in industry share being studied 19–23 percent during the period between formed [1].

These indicators two in terms of important . First , light industry province industry in the composition stable and weighty to the ring Secondly , the network share sharp exceed not gone his/her in development still unused opportunities existence shows . Therefore for in the future light industry general in industry share increase for not only working release size increase , maybe product the composition high additional to value has ready products on account of enrichment necessary [5; 8].

Light industry internal the composition analysis to do textile products working release province light in the industry leader network that it is shows . Textiles in 2016 products working release volume 1,073.2 billion soums was , in 2024 it will be 7,618.0 billion in soums reached . This is 7.1 times to grow means [1].

Table 2

Bukhara in the province light industry networks according to working release size

Year	Textile products , billion soum	Clothing working output , billion soum	Skin and to him/her relevant products , billion soums	Total light industry , billion soum
2016	1,073.2	30.1	5.0	1 108.3
2017	1,089.7	344.3	5.8	1,439.8
2019	2,458.6	502.8	7.7	2,969.1
2021	4,372.2	712.2	28.2	5 112.6
2023	5,958.5	756.0	36.2	6,750.7
2024	7,618.0	1,440.3	63.7	9 122.0
Growth , times	7.1	47.9	12.7	8.2

Source : Uzbekistan Republic National statistics committee information based on author by compiled [1].

Table 2 data this shows that Bukhara in the province light industry main part textile products organization will be . In 2024 , textile products working release volume 7,618.0 billion soum is , total light industry of products main share exactly this network to the extent right arrived [1].

Clothing working release and the most high relative growth at the pace has network as manifestation is happening . In 2016, clothing working release volume 30.1 billion soum organization reached , in 2024 it will be 1,440.3 billion in soums reached . During this period network volume 47.9 times increased . This situation Bukhara in the province ready product working release potential expanding from going evidence gives [1; 5].

Skin and to him/her relevant products working release size relatively small although , this growth in the direction is being monitored . In 2016, the network volume 5.0 billion soum organization reached 63.7 billion in 2024 in soums reached . This is 12.7 times to grow means . However skin products working of release total light industry in the content share low remains . So , leather- shoes , leather items and design based on products working release in the direction of still to work not included opportunities available [1; 7].

For the years 2023–2025 cumulative information light industry in the networks short term growth trends further more precisely shows [2].

Table 3

Bukhara in the province light industry networks cumulative working release size

Network	2023 First quarter	2023	2024 First quarter	2024	2025 First quarter	2025
Textile	1,759.9	5,958.5	2,027.1	7,534.6	2,366.5	7,914.7
Clothing	181.0	756.0	188.6	1,226.8	273.9	1,755.4
Skin products	4.5	36.2	3.5	60.4	4.9	32.6
Total light industry	1,945.4	6,750.7	2,219.2	8 821.8	2,645.3	9,702.7
Growth , year / year , %	—	—	14.1	30.7	19.2	10.0

Source : Uzbekistan Republic National statistics committee monthly information based on author by compiled [2].

From the data in Table 3 apparently It is clear that in 2024 Bukhara in the province light industry products volume by 30.7 % compared to 2023 grew . In 2025, growth rate of 10.0 percent organization This is easy . in industry growth process continue reaching shows , although, growth of pace relatively decrease on the network new in phase modernization , investment and for export directed development measures reinforcement the necessity indicates [2; 5].

Bukhara in the province light industry economic importance following in directions assessment possible .

First , light. industry province industry working release diversification in doing important factor Industry in the composition textiles , clothing and skin products working of release existence province economy one side raw material delivery from giving ready product working release to the stage take exit opportunity gives [8].

Secondly , it is light. industry local raw material deep again to work service does . Cotton from raw materials yarn , fabric , knitting fabric , ready clothes and house textile working release through additional value is created . This is in the area working release efficiency increases and from export removable income increases [5; 8].

Third , light industry employment in providing big to opportunities has . Sewing , knitting , leather- shoes and house textile working release many laborious industries are , they are women and the youth work with in providing important importance profession Especially in the district and village in the regions small sewing sex , family enterprises and micro-firms develop population their income to increase service does [7].

Fourth , light industry export potential expands . Ready clothing , knitwear , home textiles , leather goods and design products high additional to value has was export-oriented goods Bukhara in the province this products working release expansion external to the markets exit opportunities increases [5; 6].

Fifth , light. industry small business and private entrepreneurship development positive impact shows . Tailoring sex , family enterprises , cooperation based on working small working release subjects large textile clusters with in cooperation activity to conduct It is possible . This is territorial working release chain [7 ; 8].

PROSPECTS FOR THE DEVELOPMENT OF LIGHT INDUSTRY IN BUKHARA REGION. Bukhara in the province light industry develop prospects one how many strategic directions with depends .

First promising direction — textile clusters deepening . In the region cotton from raw materials ready up to the product was working release chain formation necessary . In this raw material cultivation , reproduction work , thread working release , gas preparation , sewing-knitting products working production , packaging , branding and export processes into a single system to be combined necessary [5; 8].

Second promising direction — ready product working release share increase . Bukhara in the province textile products size high although , in the future ready clothes , home textile , special clothes , children clothes , knitwear products and national design based on products working to release expansion important is considered . Because ready products thread or half ready to products relatively high additional value creates [5].

Third promising direction — leather shoes and skin products working to release development . Bukhara in the province this network size for now small although , growth potential available . Leather products working in the release modern design , national handicraft traditions and international quality standards harmony through competitive products working release possible [7].

Fourth promising direction — innovative technologies current to be . Light industry in enterprises automated sewing equipment , digital harvest technologies , quality control systems ,

modern paint and decoration technologies, electronics trade platforms and design from programs use product quality increases [5; 10].

Fifth promising direction — export geography expansion. Bukhara in the province working issued light industry products not only traditional to the markets, maybe Europe, Turkey, China, South Korea and Near East countries to the markets take exit necessary. This for products international to standards customization, certification, branding and logistics services development is required [6; 9].

Sixth promising direction — personnel preparation system improvement. Light industry development qualified personnel with directly related. Designer, technologist, tailor, cutter, quality supervisor, marketing specialist and export manager such as professions according to practical preparation reinforcement necessary. In this supreme education institutions, technical schools and working release enterprises between cooperation important importance has [7].

Seventh promising direction — small business subjects working release to cooperation attraction to do. In the districts small sewing sex, family enterprises and micro-firms activity support through large clusters with connected working release chain creation possible. In these areas employment increase and population permanent income sources to form service does [7; 8].

SCIENTIFIC AND PRACTICAL PROPOSALS

Research from the results come out, Bukhara in the province light the industry develop according to following scientific and practical suggestions previously push possible:

1. **Light in industry ready product share increase necessary.** Bukhara in the province thread and half ready products with limited ready, without delay clothing, knitwear, home textile and leather goods working to release expansion necessary [5].

2. **Textile clusters activity deepening to the goal according to.** Cluster system raw material from cultivation ready product until export was all stages cover to receive necessary [8].

3. **Clothing working release network priority develop necessary.** Statistical information this on the network high growth pace existence It is pointing in this direction. investment, technology and qualified personnel supply reinforcement necessary [1; 2].

4. **Leather shoes and skin products working release from the potential effective use need.** This in the direction modern design, national style and export standards harmonization through new product types working release possible [7].

5. **Light industry to enterprises innovative technologies current to grow necessary.** Automated sewing lines, digital harvest equipment, quality control and electronic trade systems product competitiveness increases [5; 10].

6. **Export infrastructure develop necessary.** Products international certification, logistics, branding and external markets marketing research on reinforcement necessary [6; 9].

7. **Small business and large enterprises in the middle cooperation reinforcement** In these districts new work places create, produce release size increase and local population their income to multiply service does [7; 8].

8. **Staff preparation system working release to the needs adaptation necessary.** Education institutions and industry enterprises in the middle practical cooperation on the road to be put necessary [7].

CONCLUSION. Take visited analyses this shows that Bukhara province economy in development light industry network important strategic importance has. During 2016–2024 in the province light industry products working release volume increased by 8.2 times increased. Light industry general in industry share and 19–23 percent between formed, the network province industry in the composition stable to the seat has that it is shown [1].

Network in the composition textile products working release leader place occupies. With this together, clothes working 47.9 times the output oh my god Bukhara in the province ready

product working release opportunities expanding going confirms . Skin and to him/her relevant products working release and still complete unused to the potential has direction as evaluation possible [1].

Bukhara in the province light the industry development main prospects textile clusters deepening , ready product working release share increase , leather shoes industry development , small business working release to cooperation attraction to do , innovative technologies current export geography expansion and qualified personnel preparation with related [5; 7; 8].

In general when you take it , it's easy industry Bukhara in the province industry diversification reinforcement , local raw material deep again processing , export potential increase , population busyness provide and territorial economic stability reinforcement important factor is considered . Therefore this the network strategic develop province economy far term competitiveness in providing important importance profession [4 ; 5; 10].
